## CLEAN VERSION OF PENDING CLAIMS

Claim 6 has been cancelled without prejudice or disclaimer. A marked up version requesting cancellation of claim 6 can be found on pp. 9 of this Reply.

No claim amendments have been made herein.

Below are pending claims 1-2, 5, 7-15, 17-18, and 38-39:

## 1. A surface cover comprising:

two or more leaves having a length and a width arranged to form a stack of said leaves, the stack of said leaves comprising:

- (a) at least a first leaf with a first thickness, the first leaf forming an outer surface and comprising:
  - (i) an upper non-adhesive surface adapted to serve as the outer
    - (ii) a lower surface opposing the upper non-adhesive surface; and
- (iii) a leaf adhesive material applied to substantial portions of the lower surface whereby the lower surface removably adheres to the upper non-adhesive surface of a successive, adjacent leaf such that after the first leaf is removed from the stack, the upper non-adhesive surface of the adjacent leaf is exposed to become a new outer surface of the stack; and
- (b) a base leaf underlying the first leaf and having a second thickness greater than the first thickness, the base leaf comprising an upper non-adhesive surface adapted to serve as the outer surface and an opposing lower surface adapted to mount the stack onto a surface to be covered, the opposing second surface comprising a mounting adhesive applied thereon, the mounting adhesive being of sufficient strength to prevent lifting of the stack during removal of individual leaves.
- 2. The surface covering of claim 1 comprising at least one intermediate leaf disposed between said first leaf and said last leaf, the intermediate leaf having an upper non-adhesive surface and a lower adhesive surface.

15-140

- 5. The surface covering of claim 1 wherein said upper surface of said leaves is textured.
- 7. The surface covering of claim 1 wherein said leaves are comprised of flexible material.
- 8. The surface covering of claim 1 wherein the upper surface of said leaves comprises an active agent chosen from the group consisting of anti-bacterial agents, disinfectants, insect repellants, fragrances, fluid resistant agents and anti-mildew agents.
- The surface covering of claim 1 further comprising a protecting sheet disposed on the lower surface of the base leaf.
- 10. The surface covering of claim 1 further comprising peeling means for facilitating peeling of said leaves from an adjacent leaf.
- 11. The surface covering of claim 10 wherein said peeling means comprises at least one non-adhesive section disposed on the lower surface of said leaves covering no more than 30% of the entire surface area of the lower surface of said leaves, said at least one non-adhesive section being accessible by a user to peel said leaves from said stack.
- 12. The surface covering of claim 10 wherein said peeling means comprises a tab with a first and second surface integral to each of said leaves adapted to be accessed by a user to peel said leaves from said stack.
- 13. The surface covering of claim 12 wherein said second surface of said tab comprises an adhesive.
- 14. The surface covering of claim 12 wherein said first surface of said tab comprises an adhesive.
  - 15. The surface covering of claim 12 wherein said first and second surfaces of said tab

15-140

comprise an adhesive.

- 17. The surface covering of claim 1 wherein said covering is precut to correspond to dimensions of a specific surface to be covered.
  - 18. A multi-layer surface covering comprising:

a plurality of leaves arranged to form a stack of said leaves, the stack of said leaves comprising:

- (a) at least a first leaf with a first thickness, the first leaf forming an outer surface and comprising:
- (i) an upper non-adhesive surface adapted to serve as the outer surface;
  - (ii) a lower surface opposing the upper non-adhesive surface; and
- (iii) a leaf adhesive material applied to a substantial portion of the lower surface whereby the lower surface removably adheres to the upper non-adhesive surface of an adjacent leaf such that after the first leaf is removed from the stack, the adjacent leaf becomes a new first leaf; and
- (b) a base leaf underlying the at least first leaf and having a second thickness greater than the first thickness, the base leaf comprising an upper non-adhesive surface adapted to serve as the outer surface and an opposing lower adhesive surface adapted to mount the stack onto a surface to be covered, the opposing lower surface comprising a mounting adhesive layer applied thereon, the mounting adhesive layer having greater adhesive strength than the adhesive strength of the leaf adhesive.

## 38. A surface cover comprising:

two or more leaves arranged to form a stack of said leaves, the stack of said leaves comprising:

- (a) at least a first leaf with a first thickness, the first leaf forming an outer surface and comprising:
  - (i) an upper non-adhesive surface adapted to serve as the outer

15-140

surface;

- (ii) a lower surface opposing the upper non-adhesive surface; and
- (iii) a leaf adhesive material applied to substantial portions of the lower surface whereby the lower surface removably adheres to the upper non-adhesive surface of an adjacent leaf such that after the first leaf is removed from the stack, the adjacent leaf becomes a new first leaf; and
- (b) a base leaf underlying the at least first leaf and having a second thickness greater than the first thickness, the base leaf comprising an upper non-adhesive surface adapted to serve as the outer surface and an opposing lower non-adhesive surface.
- 39. The surface covering of claim 38 comprising at least one intermediate leaf disposed between said first leaf and said last leaf, the intermediate leaf having an upper non-adhesive surface and a lower adhesive surface.
